

# THE BURNSIDE **VILLAGE TREE.**

BURNSIDE  
VILLAGE

# INTERESTING FACTS ABOUT OUR TREE.

## FACT 1

Our River Red Gum (*Eucalyptus Camaldulensis*) is approximately 90 years old. As a relatively young mature tree this specimen has the potential to live for many years with these species regularly exceeding 600 years.

## FACT 2

Marcus Lodge, from Arborman Tree Solutions, is the tree's dedicated arborist. He is responsible for the ongoing management and assessment of the tree.

## FACT 3

The roof design was incorporated to allow wind movement through the canopy and the glass was selected to allow light through to ensure photosynthesis is not inhibited.

## FACT 4

An engineered catenary system sits beneath the tree to catch material that may fall from the tree, ensuring the environment underneath is safe for customers.

## FACT 5

The tree has it's own controlled irrigation system which waters the tree at regular intervals. All watering is monitored and recorded to ensure the correct amount of water is released.

## FACT 6

Every three months, or when required, the tree has root zone applications of soil ameliorant and nutrients.

## FACT 7

To eradicate pests, the tree has pest control treatments either by soil application or stem injection when required.

## FACT 8

The tree undergoes Canopy Management to remove deadwood and dead foliage by pruning and/or by simulating wind and rain through canopy spraying.

## FACT 9

The tree still has active bird, insect and reptile activity as is noted by bird nesting activity and geckos being found in the loose bark. There are even birds nesting in the tree overnight!
